Human MTLE and mouse epilepsy: relative 50-Hallmark landscape

Conventional Hallmark GSEA

Frozen Bridge Hallmark functional state

Hedgehog Signaling
Pancreas Beta Cells
KRAS Signaling Dn
Protein Secretion
Pperoxisome
Tnf-Alpha Signaling Via Nf-Kb
UV Response Up
Notch Signaling
Apoptosis
MYC Targets V2
MYC Targets V1
DNA Repair
UV Response Dn
Heme Metabolism
Oxidative Phosphorylation
Cholesterol Homeostasis
Xenobiotic Metabolism
Apical Junction
Spermatogenesis
Interferon Alpha Response
Il-6/JAK/STAT3 Signaling
Complement
Interferon Gamma Response
Inflammatory Response
P53 Pathway
Il-2/STAT5 Signaling
Coagulation
Reactive Oxygen Species Pathway
Allograft Rejection
Apical Surface
Unfolded Protein Response
Pi3K/Akt/Mtor Signaling
Mtorc1 Signaling
Mitotic Spindle
Epithelial Mesenchymal Transition
Angiogenesis
Androgen Response
Tgf-Beta Signaling
Hypoxia
Estrogen Response Early
Glycolysis
KRAS Signaling Up
Myogenesis
G2-M Checkpoint
Estrogen Response Late
E2F Targets
Wnt-Beta Catenin Signaling
Fatty Acid Metabolism
Bile Acid Metabolism
Adipogenesis

Human MTLE
Mouse acute
Mouse intermediate
Mouse chronic

Signed effect relative to strongest pathway in each column

Each column is divided by its own largest absolute effect. Colors therefore compare signed relative pathway patterns, not absolute effect sizes or statistical support; raw NES and Bridge-head magnitudes remain in the source table.
